

GAS CARRIER WITH DUAL FUEL ENGINE

Due to the steadily increasing requirements of environmental protection, the market needs more ships than ever with a lower emission of pollutants, which can be operated economically.

That's why we are very proud to be a part of the world's first ethane fuelled gas carrier project "ECO STAR 36K" of Hartmann Reederei. It unites an innovative and forward looking, high capacity "star tri-lobe" tank design for liquefied gases with unique cost-cutting and low-emission high pressure 420 bar dual fuel drive. We could supply the cargo plant, refrigerant plant, fuel gas supply system and nitrogen plant to these vessels.

Of course, all our supplies and systems can be adapted to your project.

Test us and you will benefit from our many years of experience.

We accompany our customers from the first idea to the completion of the project.

Through all stages, planning and development, ordering and supplying, installation, commissioning and third party inspection we are your partner.

Even after completion, we guarantee you our full support for our range of abilities.

...we serve for your safety!
